

Design Technology

Making It Real

At Birchington CE Primary School we want our learners to see the importance of design in the real world.

The children will have the opportunity to use tools and equipment in a safe way to produce prototypes and products which have a real purpose and have an audience in mind. They will be able to develop their own designs using mechanisms, joining different materials and preparing food.

They will also be able to complete home learning tasks so that they can consider how their designs can be used in their homes.

Later in the school year, the children will be taking part in a DT day and specialists in different fields will visit to speak to the children and fuel their enthusiasm to become the designers of the future.
